Air Helper Kits For Leaf Spring Suspensions

BASIC KIT WITH MANUAL INFLATION

Airmax air helper springs can be installed on most LDV's, SUV's & Motor homes. They are installed between the frame of the vehicle and the suspension, providing load support through the use of air pressure.

Airmax air helper springs utilize a pair of Firestone convoluted air springs, which can be adjusted for changing loads. Each application is specifically designed to maximise the safe load carrying capacity, stability and ride quality of the vehicle.

The suspension can be inflated by a portable compressor via a valve similar to a tyre valve which is fitted on the rear of the vehicle. Also see our on-board control & tyre inflation systems.
